

GNOME Boxes

How GNOME Boxes can help distro developers

Felipe Borges <felipeborges@gnome.org>

Easy downloads

With Boxes, you don't need to download an operating system to create a virtual machine. Instead, just pick the operating system you want to setup, and Boxes will automatically download it for you.

Express installation

With express installation, Boxes will set the install options for a new virtual machine. Just start the installation and everything will be taken care of for you.

Drag and Drop

Sharing files is as simple as dropping them onto your virtual machine.

They will appear in your **Downloads** folder.

User story

As a distro packager, I want to test my package in various versions of the distro.

User story

As a distro contributor, I want to test the upgrade process of my distribution.

User story

As a release notes writer, I want to take screenshots of the newest work produced by the community.

User story

As a GNOME Shell extension developer, I want to test my extension against the upcoming GNOME Shell version.

User story

As a GNOME developer, I want to build and/or run my application in a different environment than my development machine.
