

Wrangling release feeds

Amolith

October 29, 2023

Hello o/

- Work at [MBOA.dev](#) on [JMP.chat](#)
- Been running [nixnet.services](#) mostly solo for 6-ish years
- Co-host of [linuxlads.com](#) and [linuxdowntime.com](#)
- Play double bass, guitar and sing
- Contact info is on [secluded.site](#)

Decentralisation can be painful

Decentralisation can be painful

Nothing has been more painful than keeping up with releases.

Decentralisation can be painful

Nothing has been more painful than keeping up with releases.

 - Git

They all have one thing in common

- GitHub, Gitlab, Forgejo, SourceHut, cgit, custom frontends
 - Git

“Releases” are annotated or lightweight git tags

They all have one thing in common

- GitHub, Gitlab, Forgejo, SourceHut, cgit, custom frontends
 - Git

“Releases” are annotated or lightweight git tags ... so to support arbitrary forges, we just have to understand git tags.

Badwolf 1.3.0 release! – 2023-09-19

Packagers Highlights

=====

- You now need to use ninja/samu instead of make, ./configure
- Common but non-standard hardening flags like -D_FORTIFY_SOU default but no longer forced to allow alternative compilers. Most distros already default to such flags. If yours doesn't consider copying such flags if you set cus

User Highlights

=====

Additions

- Support for translated manpages (German, French, Turkish, V
- Add basic (no domain/URL matching yet) UserScripts support
- Middle-clicks and ctrl+click opens links in a new tab

Fixes

- WebProcess crashes do not clear the URL entry anymore
- Do not set web-context when old_browser is present. This fixes crashes with WebKitGTK 2.41+

Commits

=====

Ben K (1):

Updated German translation and added German manpage

Etherpad

[Delete?](#)

Currently running 1.9.1.

New release available: [v1.9.4](#). [Update?](#)

Compatibility changes

- Log4js has been updated to the latest version. As it involved a bump of 6 major version a lot has changed since then. Most notably the console appender has been deprecated. You can find out more about it [here](#)

Notable enhancements and fixes

- Fix for MySQL: The logger calls were incorrectly configured leading to a crash when e.g. somebody uses a different encoding than standard MySQL encoding.

Forgejo

[Delete?](#)

Currently running v1.20.5-0.
